

ABSTRACT:

The invention concerns the visual ordering of broadcast events (101, 102, ...) or programs scheduled for recording: all events (110, 102, 111) selected from a program guide (10) for recording form a list (20). They are displayed on a screen with a timeline (30), at the exact positions on this line, which correspond to the times when they will be broadcast.

- 5 This gives the user a clear overview of the sequence of the programs (110, 102, 111) in the list. Overlap of programs may be resolved by the assignment of priorities (A, B, C) to the programs, programs of higher priorities being recorded first.
